

Website Design – Taiwan Xiao-Chi Vic, Hong 47523483

● Overview

● Low-fidelity and high-fidelity

This website is designed to give some useful information and trivia about Taiwanese cuisine, this includes giving several typical Taiwanese cuisine called “Xiao-Chi” and the introduction and recipe of them. In addition, there is significant difference between Northern Taiwan Xiao-Chi and southern Xiao-Chi, this website would also discuss on this topic.

● Target Users

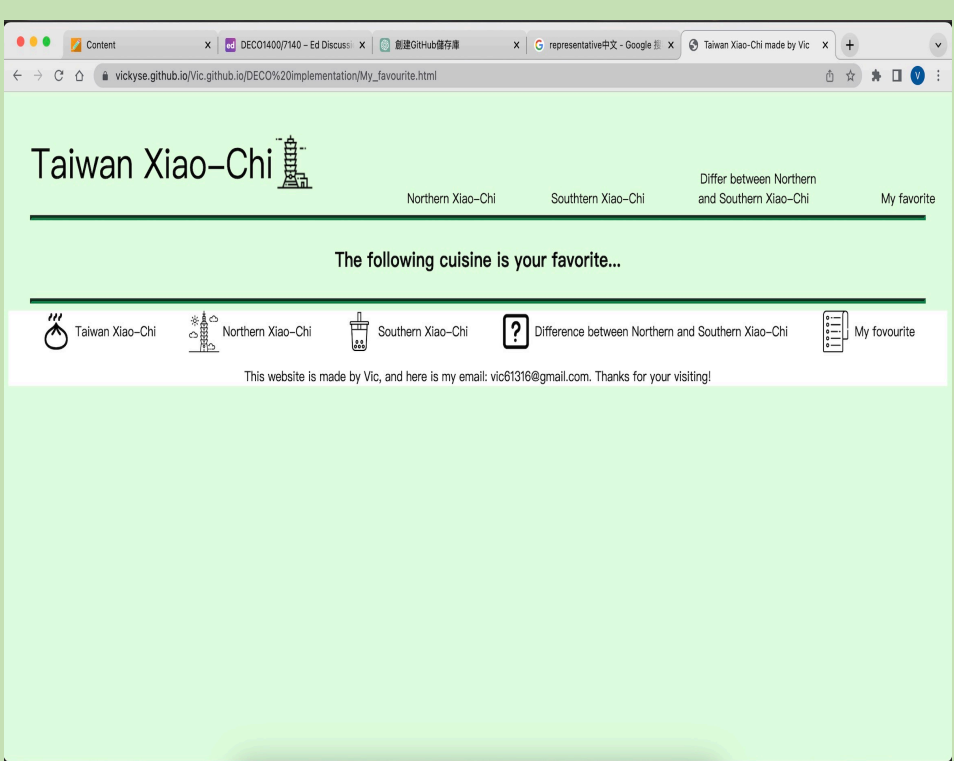

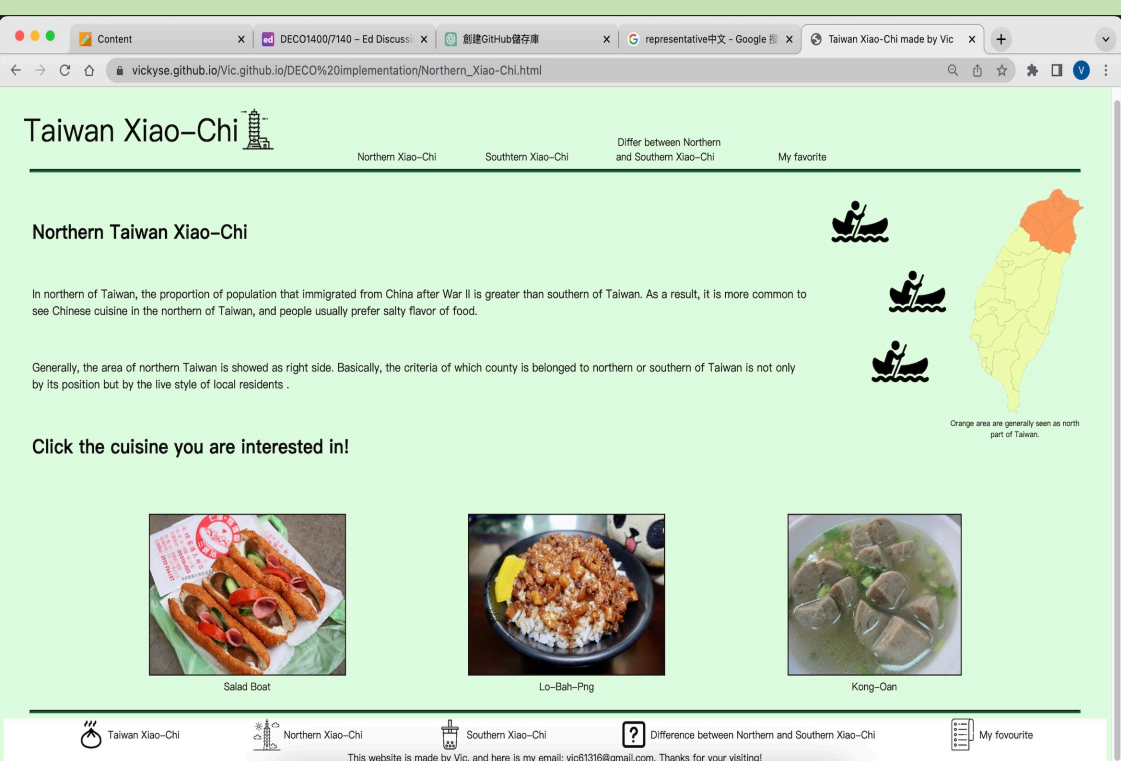

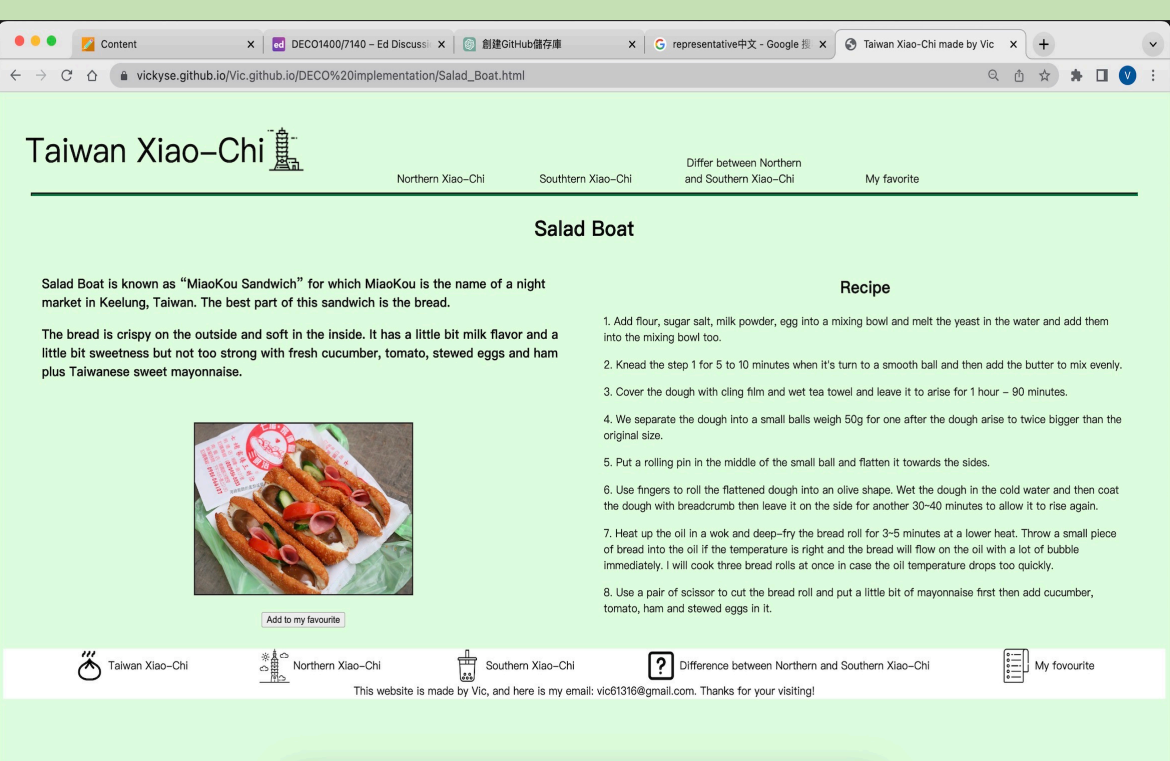

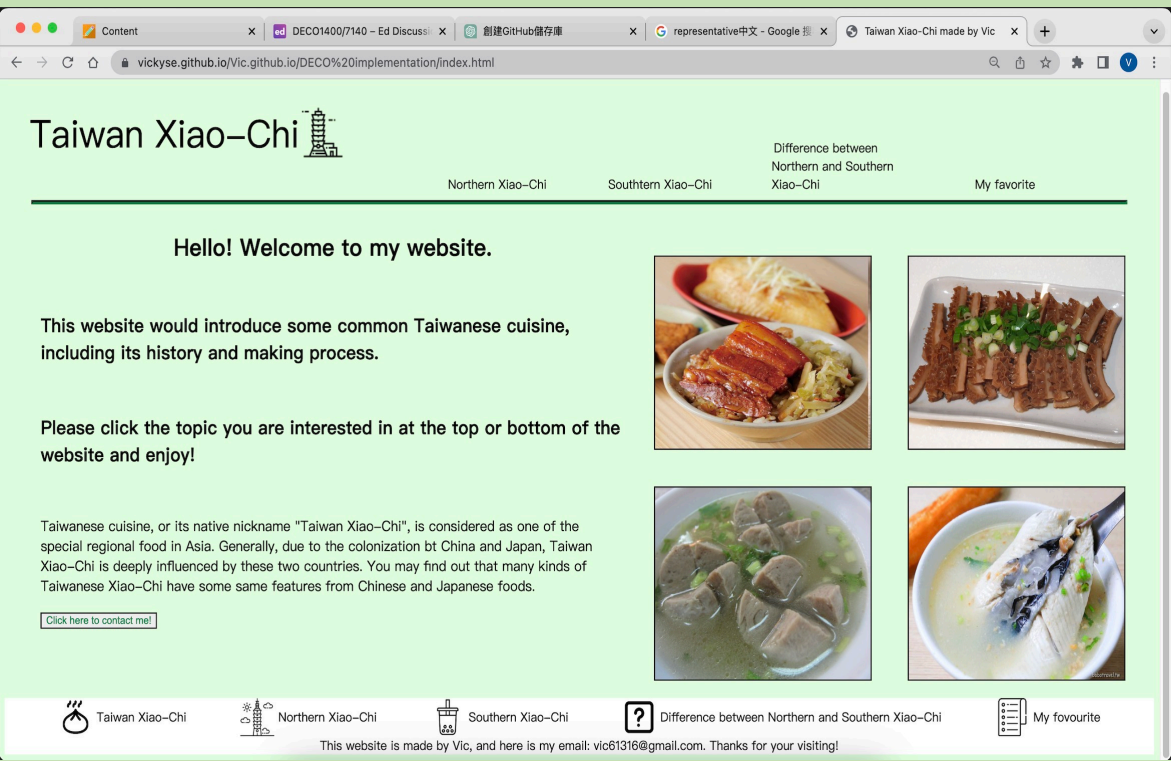

For those who are listed in follow part could visit this website:

- Having interest in Taiwanese food or even Asia food.
- Plan to have a trip head to Taiwan.

● Reflection

This website is designed based on all HTML, CSS, JavaScript, which I think is a good project for me to have a basic concept about how a website is made. The most impressive part for me of constructing this project is coding of HTML. HTML is a nested structure, so even though it seems easy to code it (just type tags and content), however, clarifying where to put the specific CSS into the HTML tags is really challenging for me because I need to be very concentrated on it. If I put CSS selector to a wrong place, the website would not display as what I expected.

● Future Work

Until now, there are still several bugs for me to fix, most of them are the positions of certain elements on the website. As mentioned, dealing that much nested html tags is really challenging for me, but I will try me best to fix it. The other issue to take care is the function of “My favourite”, I still cannot figure out how to remove a cuisine from local storage. These problem are priority to fix. In terms of extra features I plan to add, I will add more Xiao-Chi into my website, Taiwan have such many kinds of Xiao-Chi just giving maybe 6 or 7 kinds is obviously insufficient.
